# Adaptation Metrics: The Path Forward

*a pre-COP webinar with co-host IPAM*

Tuesday, 26 October 2021

1:30pm BST (London/Rabat); 8:30am (Eastern US)

**[REGISTER HERE](#)**

- Adapting to climate change has risen to ever greater prominence as a challenge for communities, businesses and local governments, financial institutions, and the international climate policy community.
- What counts as adaptation, what resources need to be mobilized, and how to measure successful adaptation all need to be better addressed to meet the Paris Agreement's Global Goal on Adaptation.
- In the run-up to COP-26, this session will address, through a series of expert presentations and a panel discussion, the use of adaptation

metrics in *national adaptation systems*, in *adaptation finance*, and in *resilience-based projects*.

- Understanding what adaptation metrics need to be deployed in these different contexts is one of the greatest of these challenges, and, at present, there is limited consensus on a path forward.
- The participants will explore current use of metrics and prospective advances in the field to facilitate solutions to the challenge of climate adaptation.

## **Featured presenters and panelists:**

Mikaela Rambali, Policy Analyst, OECD

Driss Ouazar, Vice-chair, African Scientific Research and Innovation Council (ASRIC) & Chair, IPAM Water Committee
